🔗 linkedin.com/in/pavel-prokhorenko

Senior Software Engineer, 15 years in HL/HA enterprise.

Developed Russian Railways (RZD) ticket platform and other services in different titles (from jr. to sr.) from 2011 to present.

Expert in Vue.js, Node.js and more. Strong background in enterprise software development, architecture and infrastructure.

Frontend

Built 30+ frontend apps only with modern stack.

- Vue.js v2 and v3, Vuex, Vue Router
 - Typescript
 - D3.js, Chart.js
 - Vuetify, Quasar
 - Scss, Less
-

High-Load Ticket Platform Migration

Scale: 20+ million visits per month, ~150K *paid* tickets per day.

Critical frontend migration from custom jQuery-based framework to Vue.js

- **Impact:** one SPA instead of multiple pages. ~3x less traffic and server load, improved performance, stability, UX, maintainability, shipment speed, and a modern tech stack for the future
 - **Complexity handled:**
 - Very complex business logic implemented in frontend via JS and [metadata](#)-driven server templates
 - Thousands of stations across 11 timezones; intercity, international, and commuter trains and buses
 - Tens of extra services; 3 languages support
 - Complicated testing including hundreds of scenarios
-

Russian Railways Admin Dashboard Frontend App

Modern replacement for legacy admin dashboard

- **Before:** JSP-based IBM WebSphere stateful app (built by Java developers)
- **After:** Modern async Vue.js application
- **Architecture:** Dynamic component rendering based on declarative [metadata](#)
- **Result:** Significantly improved performance and developer experience

- **Adoption:** 1000+ users
 - Complex [build pipeline](#)
-

Advanced Kanban App

Enterprise-grade project management frontend

Adoption & Scale:

- Adopted company-wide: 70+ users migrated from Jira
- Deployed at Russian University of Transport: 200+ users

Features:

- Drag-and-drop Kanban boards
 - Custom workflow configurations
 - Custom issue fields
 - Issue linking and file attachments
 - Custom WYSIWYG JSON editor (built on TipTap/ProseMirror)
-

Backend

Have strong experience in backend development and [infrastructure](#) management.

Developed 7+ Node.js services with:

- Elasticsearch
 - ~10k pages live indexing on 50+ websites
 - Complex search queries with relevance scoring
 - Logging
 - Express.js / Axios
 - PostgreSQL
 - Apache Kafka
 - Redis
 - "Retry/backoff" strategies
 - JWT and LTPA authentications
 - Logging
 - DOCx and XLSx generation
 - Integrations with various third-party APIs: JSON and XML
 - All components are [dockerized](#)
-

Desktop

MetaWizard Electron App

Complex internal desktop application (Windows/Mac/Linux)

- Designed and developed in 2017
- Maintained for 9 years then, while keeping up with the latest Electron and Node versions since 1.x and v.0.x respectively

Key Features:

- [Metadata](#) editors
 - Advanced [metadata](#) lists with filtering (including JSONPath support)
 - Database connectivity (Oracle, PostgreSQL)
 - SSH/SFTP operations
 - Complex file operations
 - Multi-repository structure with integrated [admin dashboard app](#)
-

Infrastructure

Developed and maintained complex full-cycle frontend and backend pipelines:

- **Build:** Vite, Rollup, Webpack, Babel, ESLint, Prettier, Husky, Lint-Staged etc
 - **Delivery:** Docker, GitLab CI/CD, GitHub Actions
-

Testing

Implemented testing for multiple projects (frontend, backend, desktop):

- Unit, component and E2E
 - Jest and Cypress
-

NPM Packages

- Published 10+ custom packages to the company's private registry
 - Frontend and backend, used across multiple company projects
 - Provided [various build pipelines and CI/CD](#)
-

Architecture

Designed various solutions on multi-domain basis: backend (app layer + DB layer) and frontend.

Metadata Migration

Declarative system for admin forms and user-facing pages

The metadata system defines two formats for:

- **Admin Forms** (1000+): Database-driven CRUD interfaces
- **User-Facing Pages** (500+): Data-fetching layer and component composition

Evolution:

- **Before:** Two legacy XML formats with numerous workarounds and custom solutions
- **After:** Two elegant, maintainable JSON structures with reduced overhead
- **Developed:**
 - Conversion scripts for both formats
 - Format editors for both formats in [Electron App](#)
 - [Admin dashboard app](#)

TypeScript Coverage

Led TypeScript migrations for multiple projects, improving code quality and maintainability, reducing runtime errors and enhancing DX.

Enterprise Stack

Back in the days worked much with Java, Oracle, IBM WebSphere, JSP, XSLT templates

AI Tools

Using various LLMs with various purposes and approaches.

Maintaining balance between code control and development performance.

When applicable - practicing agentic workflows and Spec-Driven Development (Openspec).

For other purposes - sure: suggestions, configuration, documentation, debugging, testing, quick prototyping, etc.

My Priorities

- **Teamwork** - Collaborating, constantly learning while sharing knowledge with others
 - **Clear design** - Architecture, tasks, code etc.
 - **Building solutions** - Either maintainable apps for years ahead OR quick PoC/MVPs
 - **Balance** - Business purposes (first priority), developer experience, and managing tech debt
-

Education

Bachelor's Degree in Geological Engineering

Peoples' Friendship University of Russia (RUDN University), Moscow, Russia, 2005 – 2009

Language skills

Fluent English, native Russian, beginner German, French and Ukrainian.

Location

Remote-first since 2013, now from Thailand. *Very* flexible with timezones (up to GMT+1).

Open to hybrid jobs if needed, as well as relocation/on-site.
